Art Unit: 1648

DETAILED ACTION

1. Applicant's response filed March 25, 2004 is acknowledged and entered. Claims 1-9, 11-19, 21 and 24-38 are pending. Claims 1-9, 11-19 and 21 are under examination.
2. The rejection of claim 6 under 35 U.S.C. 112, second paragraph, is withdrawn in view of Applicant's amendment.

Response to Arguments

3. The rejection of claims 1, 2, 4, 5 and 11-12 under 35 U.S.C. 102(b) as anticipated by Caij *et al.*, "Caij", is maintained for reasons of record. The rejection of claims 3, 6, 7-9, 13-19 and 21 under 35 U.S.C. 103(a) as obvious over Caij and further in view of Kessler *et al.*, "Kessler", and Merten *et al.*, "Merten", is maintained for reasons of record. Applicant's arguments have been carefully considered, but fail to persuade.

Applicant's substantive argument is primarily directed to the assertion that Caij fails to teach a method wherein the cell density is increased in the microcarriers. In response, the claims do not recite that the cell density is increased in the microcarriers. Even if the claims had been amended to recite the supposed limitation, the specification does not appear to support "increased in the microcarriers". Applicant argues that Caij increases cell density by moving the cells to microcarriers. In response, the claims do not specify the method by which cell density is increased. Further, cell density was increased by reducing the volume of growth medium.

Applicant also argues that the invention provides the unexpected results of prolonged cell culture time, continuously produced viral antigen and overall viral production efficiency. In response, since the claimed method steps are the same as Caij's steps, one would expect the same

results as Applicant. The steps in Caij's method are: 1) culture cells in flasks and prepare microcarriers, 2) transfer cells from flasks to microcarriers, 3) allow microcarriers to be 100% covered with cells, 4) subpassage cultures, 5) remove growth medium from microcarrier culture and add virus suspension, 6) allow virus to infect cells for one hour, and 7) add medium back in and harvest the supernatant 48 hours later. Caij's virus suspension is added to the microcarrier culture, without the growth medium, and then allowed to incubate for one hour. The cell density is increased when the microcarriers, cells, and virus are present. Therefore, these method steps (Caij, pages 113-115) read on Applicant's method steps and are anticipated or obvious over Caij.

Conclusion

4/3. No claim is allowed.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
